# 1 Introduction

This document provides comprehensive documentation for the BookWise Online Book-store RESTful API. The API supports JWT-based authentication, role-based access control, and dual storage modes (JSON and SQLite).

## 2 Base Information

- **Base URL:** `http://localhost:1010`
- **Authentication:** JWT Bearer Token
- **Content-Type:** `application/json`
- **Rate Limiting:** Implemented for security

## 3 Authentication

### 3.1 POST /auth/register

Register a new user account.

**Request Body:**

```
1 {
2   "name": "string",
3   "username": "string",
4   "email": "string",
5   "password": "string"
6 }
```

**Success Response (201):**

```
1 {
2   "user_id": 1,
3   "username": "string",
4   "role": "customer",
5   "name": "string",
6   "email": "string",
7   "token": "jwt_token"
8 }
```

**Error Responses:**

- **400 Bad Request** - Missing fields, invalid email, weak password, or duplicate username
- **429 Too Many Requests** - Rate limit exceeded (5 requests per 10 seconds)

### 3.2 POST /auth/login

Authenticate existing user.

**Request Body:**

```
1 {
2   "username": "string",
3   "password": "string"
4 }
```

**Success Response (200):**

```
1 {
2   "user_id": 1,
3   "username": "string",
4   "role": "customer",
5   "name": "string",
6   "email": "string",
7   "token": "jwt_token"
8 }
```

**Error Responses:**

- 401 Unauthorized - Invalid credentials
- 429 Too Many Requests - Rate limit exceeded (5 requests per 10 seconds)

## 4 Books Endpoints

### 4.1 GET /books

Get all books (public endpoint).

**Success Response (200):**

```
1 [
2   {
3     "id": 1,
4     "title": "string",
5     "author": {
6       "id": 1,
7       "first_name": "string",
8       "last_name": "string",
9       "bio": "string"
10      },
11     "genres": ["string"],
12     "published_at": "2023-01-01T00:00:00Z",
13     "price": 19.99,
14     "stock": 10
15   }
16 ]
```

## 4.2 GET /books/{id}

Get specific book by ID (public endpoint).

**Success Response (200):** Same structure as above, single object.

**Error Responses:**

- 404 Not Found - Book not found

## 4.3 POST /books (Admin Only)

Create new book.

**Headers:**

```
Authorization: Bearer <admin_token>
```

**Request Body:**

```
1 {
2   "title": "string",
3   "author": {
4     "id": 1
5   },
6   "genres": ["Fiction"],
7   "price": 19.99,
8   "stock": 10
9 }
```

**Success Response (201):** Complete book object with author details.

**Error Responses:**

- 401 Unauthorized - Missing/invalid token
- 403 Forbidden - User not admin
- 400 Bad Request - Invalid input
- 429 Too Many Requests - Rate limit exceeded

## 4.4 PUT /books/{id} (Admin Only)

Update existing book.

**Headers:**

```
Authorization: Bearer <admin_token>
```

**Request Body:** Same as POST /books.

**Success Response (200):** Updated book object.

**Error Responses:** Same as POST /books plus 404 Not Found.

#### 4.5 DELETE /books/{id} (Admin Only)

Delete book.

**Headers:**

```
Authorization: Bearer <admin_token>
```

**Success Response (204):** No content.

**Error Responses:** Same as PUT /books/{id}.

### 5 Authors Endpoints

#### 5.1 GET /authors

Get all authors (public endpoint).

**Success Response (200):**

```
1 [  
2   {  
3     "id": 1,  
4     "first_name": "string",  
5     "last_name": "string",  
6     "bio": "string"  
7   }  
8 ]
```

#### 5.2 GET /authors/{id}

Get specific author by ID (public endpoint).

**Success Response (200):** Single author object.

**Error Responses:**

- 404 Not Found - Author not found

### 5.3 POST /authors (Admin Only)

Create new author.

#### Headers:

```
Authorization: Bearer <admin_token>
```

#### Request Body:

```
1 {
2   "first_name": "string",
3   "last_name": "string",
4   "bio": "string"
5 }
```

**Success Response (201):** Complete author object.

#### Error Responses:

- 401 Unauthorized - Missing/invalid token
- 403 Forbidden - User not admin
- 400 Bad Request - Missing first/last name
- 429 Too Many Requests - Rate limit exceeded

### 5.4 PUT /authors/{id} (Admin Only)

Update existing author.

#### Headers:

```
Authorization: Bearer <admin_token>
```

**Request Body:** Same as POST /authors.

**Success Response (200):** Updated author object.

**Error Responses:** Same as POST /authors plus 404 Not Found.

### 5.5 DELETE /authors/{id} (Admin Only)

Delete author.

#### Headers:

```
Authorization: Bearer <admin_token>
```

**Success Response (204):** No content.

**Error Responses:** Same as PUT /authors/{id}.

## 6 Orders Endpoints

### 6.1 POST /orders

Create new order.

**Headers:**

```
Authorization: Bearer <customer_token>
```

**Request Body:**

```
1 {
2     "items": [
3         {
4             "book_id": 1,
5             "quantity": 2
6         }
7     ],
8     "total_price": 39.98
9 }
```

**Success Response (201):**

```
1 {
2     "id": 1,
3     "user_id": 1,
4     "user": {
5         "id": 1,
6         "username": "string",
7         "role": "customer",
8         "name": "string",
9         "email": "string"
10    },
11    "items": [
12        {
13            "book": {
14                "id": 1,
15                "title": "string",
16                "author": {
17                    "first_name": "string",
18                    "last_name": "string"
19                },
20                "price": 19.99
21            },
22            "quantity": 2
23        }
24    ],
25    "total_price": 39.98,
```

```
26 "created_at": "2023-01-01T00:00:00Z",
27 "status": "confirmed"
28 }
```

#### Error Responses:

- 401 Unauthorized - Missing/invalid token
- 400 Bad Request - Invalid input, insufficient stock, or book not found
- 429 Too Many Requests - Rate limit exceeded

### 6.2 GET /orders

Get current user's orders.

#### Headers:

```
Authorization: Bearer <customer_token>
```

**Success Response (200):** Array of order objects.

#### Error Responses:

- 401 Unauthorized - Missing/invalid token
- 429 Too Many Requests - Rate limit exceeded

## 7 Users Endpoints

### 7.1 GET /users/me

Get current user profile.

#### Headers:

```
Authorization: Bearer <token>
```

**Success Response (200):**

```
1 {
2   "id": 1,
3   "username": "string",
4   "role": "customer",
5   "name": "string",
6   "email": "string"
7 }
```

## Error Responses:

- 401 Unauthorized - Missing/invalid token
- 429 Too Many Requests - Rate limit exceeded

## 7.2 GET /users?role=customer (Admin Only)

Get all customers.

### Headers:

```
Authorization: Bearer <admin_token>
```

**Success Response (200):** Array of customer objects.

### Error Responses:

- 401 Unauthorized - Missing/invalid token
- 403 Forbidden - User not admin
- 429 Too Many Requests - Rate limit exceeded

## 8 Reports Endpoint

### 8.1 GET /reports (Admin Only)

Get sales reports.

### Headers:

```
Authorization: Bearer <admin_token>
```

**Success Response (200):**

```
1 {
2     "total_orders": 5,
3     "total_revenue": 199.90,
4     "average_order_value": 39.98
5 }
```

### Error Responses:

- 401 Unauthorized - Missing/invalid token
- 403 Forbidden - User not admin
- 429 Too Many Requests - Rate limit exceeded

## 9 Rate Limiting

Endpoint Type	Limit	Purpose
Authentication (/auth/*)	5 requests / 10 seconds	Prevent brute force attacks
Admin endpoints	10 requests / 30 seconds	Prevent admin spam
API endpoints	20 requests / second	Allow normal usage
Public endpoints	No rate limiting	Allow public browsing

When rate limited:

- **Status:** 429 Too Many Requests
- **Header:** Retry-After: 60
- **Body:** {"error": "rate limit exceeded - too many requests"}

## 10 Data Types

- **Content-Type:** Always application/json
- **Date Format:** ISO 8601 (2023-01-01T00:00:00Z)
- **IDs:** Always positive integers
- **Stock:** Non-negative integers
- **Passwords:** Minimum 8 characters
